1. INTRODUCTION

During the last years the sanitation sector arouses much convergent interests on the part of the international community, public, private and national Communities of actors. . Thus, within the framework of the Millennium Development Goals (MDGs), an increase in the rate of sanitation service delivery in developing countries beyond the year 2015 is aspired as a measure to reduce the current 2.4 billion people who lack access to basic sanitation. Tackling the MDGs in the field of sanitation requires a strong involvement of various actors: engineers, trainers, researches and academics, NGOs and private companies, administrations and policy makers.

The ***Network for the Development of Sustainable Approaches for Large Scale Implementation of Sanitation in Africa (NETSSAF)*** is a framework that includes 19 institutions from Europe and Africa. All these institutions are working in the fields of research, training, promotion of appropriate technologies and sanitation strategies; with a view to implement through these actions sustainable sanitation solutions on a large scale in West Africa. The activities aim primarily to:

- Identify key actors of sanitation in the project region,
- Reinforce the capacities of stakeholders and institutions involved in the sanitation sector,
- Contribute to finding solutions of sanitation problems by using local resources while taking into account the cultural and socio-economic situation of the populations,
- Facilitate information flow on sanitation data of the projected 11 countries of West Africa,
- Create a regional data base (West Africa) that supplies practical information on: counselling companies, equipment supplies, training institutions and trainers, individuals and NGOs, private and public organizations intervening in the sanitation sector.

However, it is recognized that the sustainability of any system, particularly in the sanitation sector can only be guaranteed if certain conditions are fulfilled:

- the availability of sufficiently trained personnel (capacity building of key actors),
- the upgrading of the existing sanitation systems
- the validation of innovative, adapted or performed technologies and systems.

The degree of involvement of each actor varies and not only deserves to be known and reinforced, but also, to be documented and diffused.

Within this part of our work, key actors in the field of sanitation are identified and characterized in 11 countries in West Africa, namely; Benin, Burkina Faso, Bissau Guinea, Mali, Côte d'Ivoire, Ghana, Niger, Togo, Senegal, Equatorial Guinea and Mauritania.

1.1. Description of the sub-task

Municipalities, rural associations of women and indigenous, rural cooperatives, local, regional and national authorities, among many other actors were identified and schematised in a data base, in order to create a dissemination platform. BOATA and CREPA carried out these two activities in Region A; meanwhile UAA and MTM evaluated region B and KNUST, CEPAPE and Ville-de-SYA Region C. CREPA compiled the settlement evaluation results and listed the complete assessment of the potential regions or localities in a report. GTZ, on account of its experience and already gathered information on sanitation implementation in West African was a great contributor to this task. CREPA compiled the information regarding the key stakeholders in a final report.

The regions are grouped as follows:

Region A: Mauritania, Mali, Niger and Equatorial Guinea

Region B: Senegal, Ghana and Côte d'Ivoire

Region C: Burkina Faso, Benin, Togo and Bissau Guinea

1.2. Specific objective

The objective of this task is to identify key actors and relevant stakeholders in the field of sanitation within the project area for further use of this data in upcoming workpackage. The compiled database should offer the possibility to other members of the consortium to have an overview of relevant partners. Tasks that carry out workshops will know whom to contact for their national, regional or local workshops..

2. METHODS

On the basis of an orientation chart provided by task 1.3 (Criteria for identification of key actors) a data-gathering sheet (appendix 1) was produced, allowing to collect data in the whole region. This information is provided for 11 countries of the three regions (A, B and C defined in the table above) by the NETSSAF local partners in West Africa according to the following table:

Table 1: Distribution of countries surveyed per local partner.

Zone	Partner	Countries
A	CREPA	Maritania
		Equatorial Guinea
	BOATA	Mali
		Niger
B	MTM	Senegal
	KNUST	Ghana
		Togo
	UAA	Ivory Coast
C	CEPAPE	Bissau Guinea
		Benin
		Burkina Faso
	Ville-de-Sya	Burkina Faso

In order to gather the information, the NETSSAF local partners mainly focussed on:

- Resource persons in the different countries,
- Bibliographic researches;
- Internet researches;
- Some contacts with public administrators at high level in the ministries in charge of sanitation, public health, education...etc.

3. RESULTS

3.1. Zone A: Mauritania, Mali, Niger and Equatorial Guinea

4. CONCLUSION

In most of the surveyed countries, the sanitation sector is characterized by a multitude of actors: **(I)** public actors (ministries and engineering departments); **(ii)** public operators (national companies and offices); **(iii)** local communities; **(iv)** basic Community organizations; **(v)** NGOs; **(VI)** international organizations; **(vii)** private companies (offices studies, companies, individual companies, suppliers), **(viii)** recipients, **(ix)** informal actors (the cesspool clearer handbooks) and **(x)** training institutions and trainers (specialized universities, centres... etc.).

In the sanitation sector, many changes had taken place these past years and this induced the evolution in the role of the various actors. The public sector is currently disengages from the exploitation of the works. This situation goes closely with the emergence and the development of other actors, in particular the private sector and the local communities.

It would be interesting to improve or develop better frameworks for collaboration, exchanges, training and sharing of information between all those various actors in order to facilitate the tackling of the MDG in the sanitation sector.

5. APPENDIX

5.1 Identification of potential key actors to be included in the dissemination strategy (see D02).

Data sheets used to gather and classify the sanitation actors

Primary stakeholders	
Representatives of public/communal institutions/infrastructures with and without sanitation facilities	
- Schools/Health Centres - Markets - Restaurants/Bars	
Private sector (local)	
Municipalities and subdivisions	
Opinion leaders	
Civil Society (local)	
Secondary stakeholders	
Ministries concerned (Water, Sanitation, Health, Environment, Education and Agriculture)	
National and deconcentrated technical services	
NGOs / Consulting companies (if directly involved)	
Devolved structures (Levels above municipalities)	
- Provinces - Districts	
Financial sector	
External stakeholders	
Consulting Companies (if not directly involved in the project)	
NGOs (national and regional, if not directly involved in the project)	
Private sector at national level (traders of fertilisers, etc.)	
Training and Research Institutions	
Medias	
Donors (in relevant fields) and international organisations
