

Start-up and performance of DEWATS plants in Afghanistan

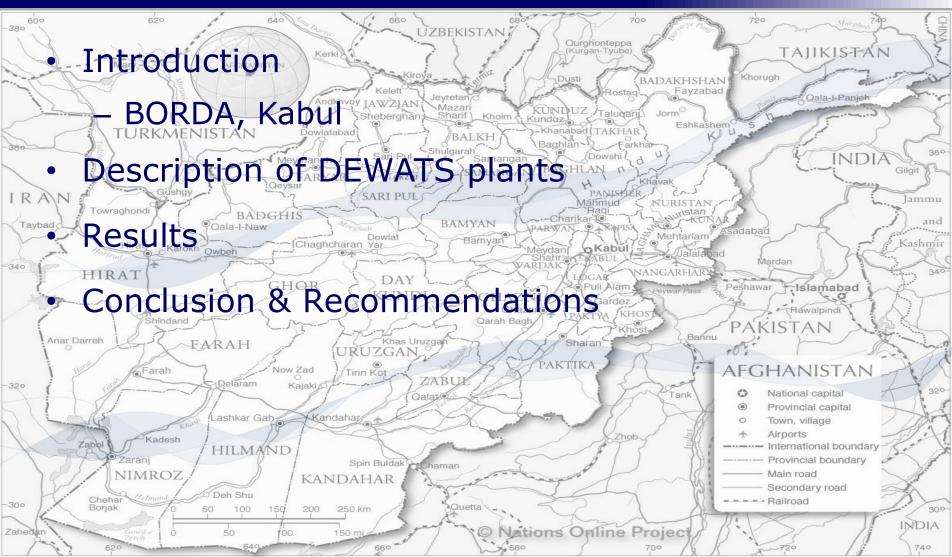

3rd IWA Development Congress & Exhibition

Masoume Mirzaei
16th of October 2013

Presentation structure

BORDA in Afghanistan

- DEWATS implementation
- School Based Sanitation
- Capacity building
- Prefab DEWATS

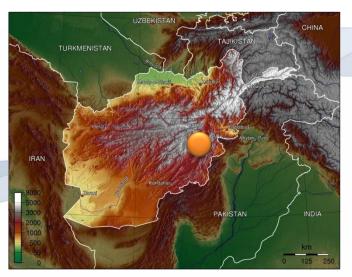

introduction

Kabul

- Located in a narrow valley
- 1700 m above sea level
- Population: 3300000
- -25 to +37°C
- Water sources: ground water
- WW treatments system and common practices:
 - Flush toilet with soak pit
 - Use of dry toilet system (anal cleansing with water or stones)

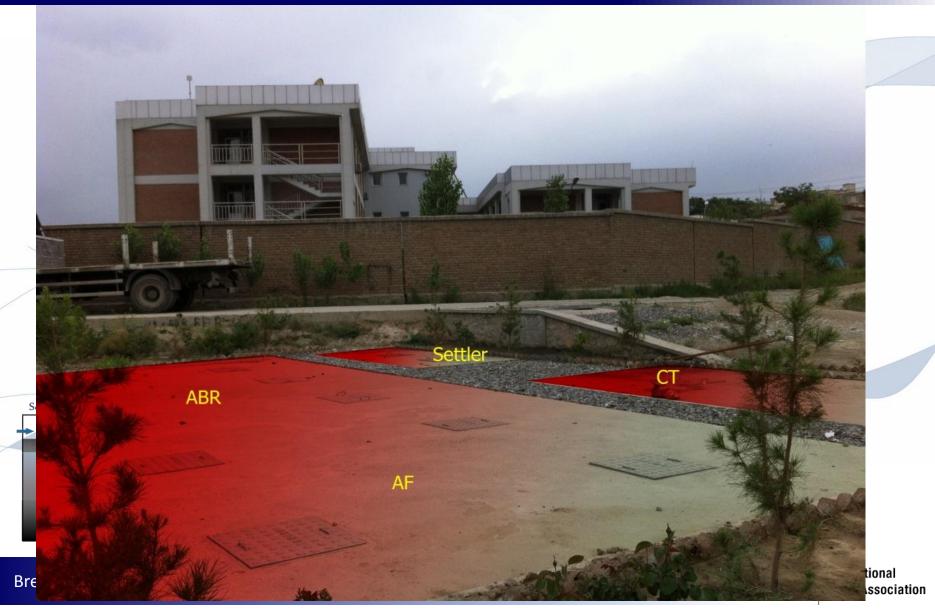

Monitored DEWATS plants

- Training Centre and prefab factory (17-60 people)
- Governmental office (200 people)
- Mosque (1000-4000-10000 people per prayer time)

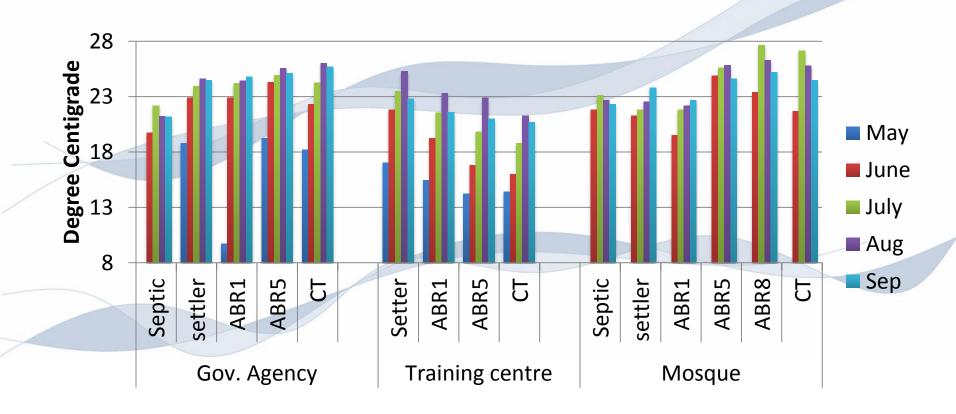

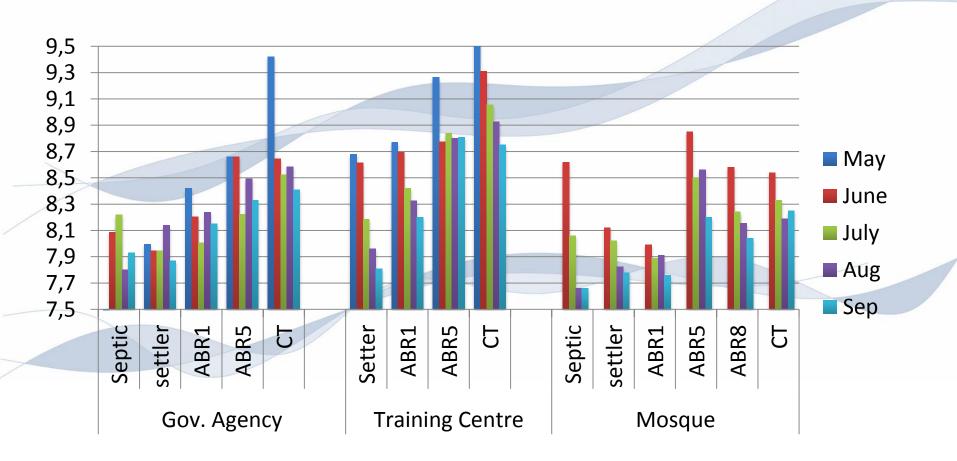

Temperature comparison

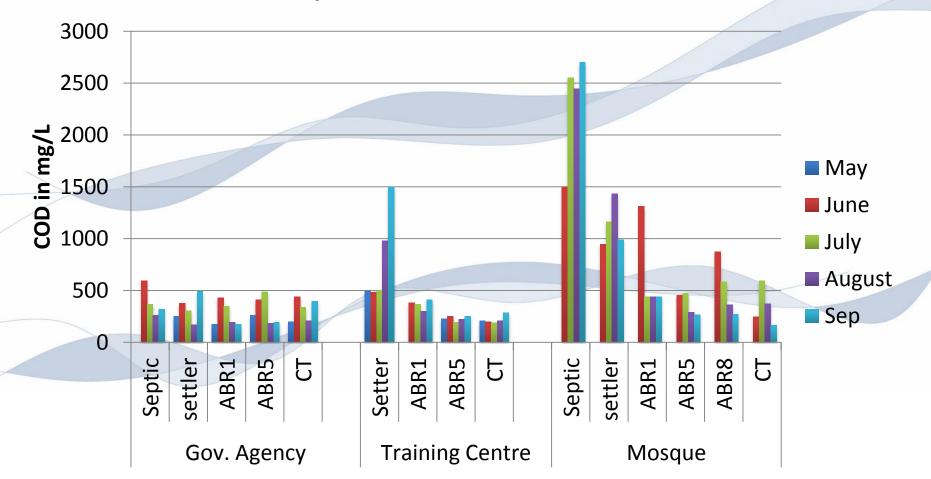

pH comparison

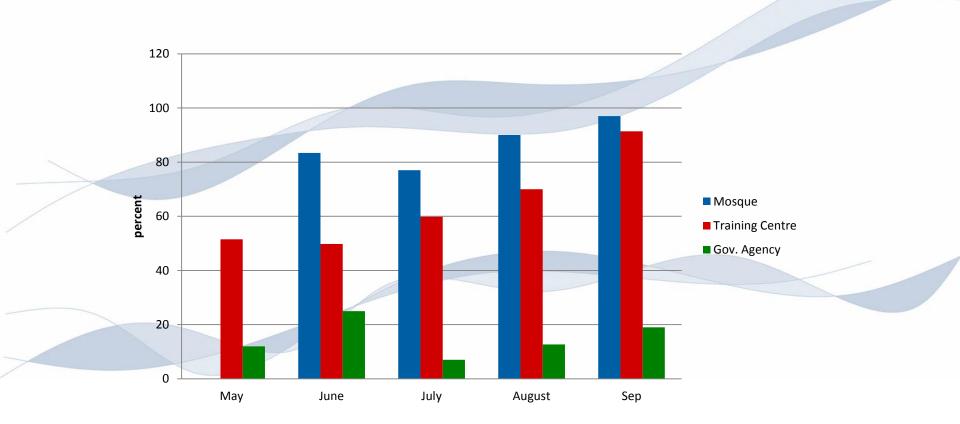

COD value comparison

Treatment efficiency

Conclusion & Recommendations

- High organic load shows high treatment efficiency
- Gov.Agency needs longer startup period
- Sludge buildup measurement
- Prolonged monitoring necessary
- Influence of winter season

Thank you!

Tashakkor!

Asante sana
